

	<p>Fig 1. Shows adhesive foamcore board, image to be mounted and cut matboard to be assembled.</p>		<p>Fig 7. Remove the image and set aside. With a sharp blade, score a cut into the surface wax coating of the foamcore from point to point, all round. DON'T cut deep into the foamcore board- 1mm depth is ample!</p>
	<p>Fig 2. Place the cut-to-size matboard on top of your piece of adhesive foamcore and cut piece of foamcore to the same size as the outside edge measurements of your matboard.</p>		<p>Fig 8. Locate the image back down onto the foamcore inside the boundaries of the score lines and corner spots and take a piece of masking tape and carefully hinge the image in place on one edge.</p>
	<p>Fig 3. Once you have your foamcore cut to size, mock assemble your image to locate it exactly where on the foamcore it will end up. To do this place the matboard down on top and align all outside edges.</p>		<p>Fig 9. Smooth the masking tape hinge down so that it holds the image firmly in place. Then fold the image back on the hinged edge like a page in a book to expose the middle area of the foamcore board beneath.</p>
	<p>Fig 4. When you are satisfied that your image is located in the correct position, carefully remove the matboard, taking care not to move the image which is now left sitting on the foamcore piece.</p>		<p>Fig 10. With the tip of your blade, carefully lift the coating sheet at the corner and peel off the entire piece inside the corner points and score lines. The outside coating sheet should remain in place for now.</p>
	<p>Fig 5. With a permanent marker, mark a spot on the foamcore where each corner of the image is located.</p>		<p>Fig 11. You now have the adhesive area of the foam core exposed where the image will be located. You should now put on a glove with the hand that will gently be patting the image down onto the foamcore.</p>
	<p>Fig 6. Mark ALL corners!</p>		<p>Fig 12. Lift the image back and from the masked hinged edge, start to pat the image down onto the adhesive area of the foamcore. Don't drop it or air pockets may occur!</p>

	<p>Fig 13. Pat the image gently down into place moving from the hinged side out towards the opposite side until you have put the entire image down and press gently to ensure even adhesion.</p>		<p>Adhesive Foamcore and Matboard can be purchased from Jackson's Art Supplies by the sheet. They also stock the Logan mat cutters and rulers and spare blades.</p>
	<p>Fig 14. You may now remove the masking tape hinge gently as it is no longer required to hold the image anymore.</p>		
	<p>Fig 15. Using the tip of your blade again, lift one corner of the remaining surrounding foamcore coating sheet.</p>		
	<p>Fig 16. Proceed to peel away the entire foamcore coating sheet which now surrounds the affixed image in the centre.</p>		
	<p>Fig 17. Carefully place your pre-cut matboard lightly down on top of the foamcore, gently moving it into place until the outside matboard edges match up with the outside edges of the foamcore backing.</p>		
	<p>Fig 18. Once the covering matboard is located correctly, pat gently into place with your gloved hand and your project is complete.</p>
